

# AL-KO Drastically Reduces TCO, Outages, and Onboarding Times for New Sites from Months to Days by Replacing MPLS with Aryaka's SD-WAN

QUALITY FOR LIFE

CASE STUDY

 Technology and Manufacturing

 Small Enterprise

 [www.al-ko.com](http://www.al-ko.com)

AL-KO Gardentech is one of the global players among German medium-sized companies. The modern company with long-established traditions and Headquarters in Kötz, Germany employs around 700 people and operates at 19 locations all over the world. In 2023, AL-KO Gardentech reported revenue of around 250 million Euros. What began in 1966 with the production of the first lawn mower has developed into one of the market leaders in the garden tool sector to this day. The products have always been manufactured with a high degree of care, creativity and technical perfection. The brand promise "QUALITY FOR LIFE" stands for the unique product and service quality of AL-KO then as it does now.

## Business Challenges

Prior to working with Aryaka, AL-KO had 19 sites globally connected by various WAN solutions such as site-to-site VPN, DMVPN, and primarily MPLS. Their challenges included:

- Mounting expenses to maintain MPLS and WAN optimization infrastructure.
- Slow process to onboard new MPLS sites.
- Frequent and prolonged MPLS outages due to communication challenges between the MPLS provider and local partners in certain countries.
- Cloud services, particularly Microsoft 365, experienced slow performance as public internet traffic was routed through a central firewall.

## Solution Overview

Aryaka implemented a proof of concept across customer sites in Denmark and China.

 *The compelling combination of Aryaka's overall WAN performance, onboarding experience, and total cost of ownership convinced us to choose Aryaka over other vendors.*

- Solschi Bogdan, Teamleader Global Operations Services

Following the successful proof of concept, Aryaka's solution was deployed to all sites, including the customer's main datacenter in Germany.

After four years of using the Aryaka SD-WAN solution, some advantages became more apparent:

- Considerable reduction in outage frequency by leveraging different ISPs and ISP circuits, with improved service restoration times.
- Aryaka went the extra mile by implementing a feature request that enhanced failover for security connectors with our third-party security partner.

- Excellent last-mile monitoring capabilities between the ANAP and the POP facilitated easy troubleshooting of performance issues in local ISP backbones. For example, one of our local ISP providers had a defective SFP module in a router within its backbone. We were able to provide accurate statistics regarding the increasing packet loss and TCP retransmissions. This helped the ISP to quickly identify and resolve the issue.

*“AL-KO has been working with a classic MPLS provider for a long time. The MPLS provider could be compared to a cargo ship. Slow and inflexible. When it came to selecting a new, global WAN solution, we decided in favour of SD-WAN from Aryaka. In comparison, Aryaka behaves like a speedboat with totally friendly staff. Aryaka provides AL-KO with a fast, courteous and reliable service. We procure the last mile internet lines ourselves and Aryaka takes care of everything else from the POP. This gives us great flexibility and a high velocity for changes”*

- Palinkas Kevin, Head of IT

## Business Results with Aryaka:

	<p>Onboarding times for new sites were reduced from months with MPLS to days with Aryaka SD-WAN.</p>		<p>Zero Touch Deployment with Smart Hands for branch offices minimized travel times and costs.</p>
	<p>Reduced latency between Germany and China from 220ms to 180ms compared to the previous MPLS provider.</p>		<p>Increased public internet speed and Microsoft 365 performance by leveraging local breakouts instead of a centralized firewall and proxy servers.</p>
	<p>Traffic optimization and caching features on the ANAP and in the POP.</p>		<p>Decreased Total Cost of Ownership and improved flexibility by utilizing local internet providers for the last mile and a 3rd party security connector / cloud firewall instead of MPLS with a centrally managed firewall and WAN optimization appliances.</p>

## About Aryaka

Aryaka is the leader in delivering Unified SASE as a Service, a fully integrated solution combining networking, security, and observability. Built for the demands of Generative AI as well as today’s multi-cloud hybrid world, Aryaka enables enterprises to transform their secure networking to deliver uncompromised performance, agility, simplicity, and security. Aryaka’s flexible delivery options empower businesses to choose their preferred approach for implementation and management. Hundreds of global enterprises, including several in the Fortune 100, depend on Aryaka for their secure networking solutions. For more on Aryaka, please visit [www.aryaka.com](http://www.aryaka.com).
